Hi Gary,

Did we ever talk about the relatively high degree of uncertainty of models being able to simulate actual conditions during a hurricane, especially a cat 4 hurricane? By that I mean we can get hydrodynamic and wave models to run for the conditions (winds, pressures, surge) during the event, but the models have never been calibrated/validated for such extreme conditions or were initially even developed to be able to do so, so who knows how close the results will be to actual conditions is just a guess. Just wanted to give you this heads up in case we have not discussed this in the past.

Earl

Paul,

The current list of BMP/constructability comments are attached; we can discuss this next week after you've had a chance to look them over. A few already have some draft language that can be modified as appropriate.

Thanks,

Gary, FYI

I have reserved the West Conference Room for an all day meeting.

Caveats: FOUO

I am available on April 26. I am checking on availability of Galveston District personnel. One individual (a hydraulics/dredging engineer) will be in Dallas that week for a conference and could attend for several hours but I have feelers out for a cost engineer and coastal construction engineer as well and expect to hear back from them soon.

Paul

Paul,

Please let me know if you and others (Galveston COE?) are available for a meeting here in Dallas for the BMP workshop on April 26. I expect to send to you the BMP related comments list tomorrow. Also, let me know how many will be attending & their names. Let's plan for a full day to discuss the comments, about 9 to 5. Let's start the meeting with introductions, then I'll do a brief site background, then we can work through the comments.

Thanks,

Gary Miller
